This instrument, known as the curl sizing tester, was designed to use the rate of curl of paper, when wet on one side, as a measure of the rate of penetration of water into the paper. In the extended use of the instrument the maximum angular displacement of the specimen is used as an indication of curling tendency.

Measuring the degree of curl of paper - NIST Page

1. Scope. 1.1 This test method covers the determination of the curl of carbonless copy papers, that is, the degree of curvature of a sheet of these papers when exposed to varying conditions of humidity. 1.2 This test method may be used for manufacturing control, development, and research.

Standard Test Method for Curl of Carbonless Copy Papers

Curl is generally considered to be the tendency of paper or paperboard to curl or roll up in the cross machine direction, usually in response to changes in relative humidity (RH). This is often referred to as "CD curl". Machine direction curl (MD) is often called "roll set curl". Curl tendency can be measured using a variety...

Warping, Curl and Twist. The shape of paper and board is defined by curl and twist. Curl is defined as the inverse of the radius of curvature of the sheet, and is positive when the printed side is convex. Curl in paper and board can cause problems in a variety of printing and packaging processes.

Warping, Curl and Twist | Print Quality and Durability ...

Curl Problems. Paper tends to curl most in the direction of the side or surface from which moisture migrates last. Curl problems during use can be expected if the moisture content of the paper does not correspond to the equilibrium humidity condition that will be present when the paper is converted or printed.

Curl Problems (Troubleshooting Guide)

The Effect of Moisture on Paper. Paper on coming off the driers of a paper machine contains from 3-5% moisture. Paper from the loft contains from 2-3% moisture, depending on loft conditions. These moisture ranges are the ones that are suitable for the ordinary ranges of humidities ordinarily encountered.

The Effect of Moisture on Paper - Conservation OnLine

Paper curl generation mechanism by heat temperature difference. The test showed that when heating creates a difference in temperature, moisture travels in the thickness direction of the paper from the high-temperature side to the low-temperature side, and moisture content of the paper on the low temperature side rises.

Paper curl is caused by excess humidity in the paper. When paper passes through the fuser, the combination of heat and pressure required to bond toner to the paper also causes curling because of excess moisture in the paper. All laser printer are susceptible to this. You may be thinking, that's ridiculous, my paper is dry, and it works fine ...
