PL/SQL procedure syntax. A PL/SQL procedure is a reusable unit that encapsulates a specific business logic of the application. Technically speaking, a PL/SQL procedure is a named block stored as a schema object in the Oracle Database. The following illustrates the basic syntax of creating a procedure in PL/SQL:

**PL/SQL User's Guide and Reference - Oracle**

PL/SQL is a procedural language designed specifically to embrace SQL statements within its syntax. PL/SQL program units are compiled by the Oracle Database server and stored inside the database. And at run-time, both PL/SQL and SQL run within the same server process, bringing optimal efficiency. PL ...

**Oracle PL/SQL**

PL/SQL is a combination of SQL along with the procedural features of programming languages. It was developed by Oracle Corporation in the early 90's to enhance the capabilities of SQL. PL/SQL is one of three key programming languages embedded in the Oracle Database, along with SQL itself and Java ...

**PL/SQL Tutorial**

PL/SQL is case-insensitive i.e. var and VAR refer to the same variable. How to declare variable in PL/SQL: We have to declare a PL/SQL variable in the declaration section or in a package as a global variable. After declaration PL/SQL allocates memory for the variable and variable name is used to identify the storage location. Syntax:

SQL is a standard language for storing, manipulating and retrieving data in databases. Our SQL tutorial will teach you how to use SQL in: MySQL, SQL Server, MS Access, Oracle, Sybase, Informix, Postgres, and other database systems.

**SQL Tutorial - W3Schools**

Introduction to PL/SQL CASE Statement. The PL/SQL CASE statement allows you to execute a sequence of statements based on a selector. A selector can be anything such as variable, function, or expression that the CASE statement evaluates to a Boolean value. You can use almost any PL/SQL data types as a selector except BLOB, BFILE and composite types.
