Object-oriented programming is more than just classes and objects; it's a whole programming paradigm based around [sic] objects (data structures) that contain data fields and methods. It is essential to understand this; using classes to organize a bunch of unrelated methods together is not object orientation.

Object-oriented programming - Wikipedia

Perl is a family of two high-level, general-purpose, interpreted, dynamic programming languages. "Perl" usually refers to Perl 5, but it may also refer to its redesigned "sister language", Perl 6. Though Perl is not officially an acronym, there are various backronyms in use, including "Practical Extraction and Reporting Language". Perl was originally developed by Larry Wall in 1987 as a ...

The attached project is a simple demonstration of using the Windows Crypto functions to create a hash. The example produces an MD5 hash of a file or a typed in string and returns it in hex. It could easily be modified to return a Byte array of the hash, and could also easily perform an SHA1, etc. hash instead of MD5. This can also be done easily via CAPICOM, which is a COM wrapper for the API ...

TWINE: Designed by engineers at NEC in 2011, TWINE is a lightweight, 64-bit block cipher supporting 80- and 128-bit keys. TWINE's design goals included maintaining a small footprint in a hardware implementation (i.e., fewer than 2,000 gate equivalents) and small memory consumption in a software implementation.
