Electricity is the set of physical phenomena associated with the presence and motion of matter that has a property of electric charge. In early days, electricity was considered as being not related to magnetism. Later on, many experimental results and the development of Maxwell's equations indicated that both electricity and magnetism are from a single phenomenon: electromagnetism.

Temperature is another important variable. The above properties were measured at room temperatures. As temperatures increase up to the limit of 1,063°F (573°C) mentioned in Endnote 81, the piezoelectric coefficient increases and breakdown voltages decrease—both contributing to more extensive and powerful plasma production.. 81.
