A database is an organized collection of data, generally stored and accessed electronically from a computer system. Where databases are more complex they are often developed using formal design and modeling techniques.. The database management system (DBMS) is the software that interacts with end users, applications, and the database itself to capture and analyze the data.

A hierarchical query is a type of SQL query that handles hierarchical model data. They are special cases of more general recursive fixpoint queries, which compute transitive closures.. In standard SQL:1999 hierarchical queries are implemented by way of recursive common table expressions (CTEs). Unlike Oracle's earlier connect-by clause, recursive CTEs were designed with fixpoint semantics from ...

Hierarchical and recursive queries in SQL - Wikipedia

This paper proposes an open and distributed clinical decision support system architecture. This technical architecture takes advantage of Electronic Health Record (EHR), data mining techniques, clinical databases, domain expert knowledge bases, available technologies and standards to provide decision-making support for healthcare professionals.

A distributed clinical decision support system architecture

1. Statement of the problem. Fatigue is a significant problem in modern society, largely because of high workplace demands, long duty periods, disrupted circadian rhythms, social and societal demands, and insufficient sleep (Sadeghniiat-Haghighi and Yazdi, 2015; Luckhaupt, 2012). It is a complex phenomenon that occurs as a function of time awake, time-of-day, workload extremes, health, and on ...
