Pathogenesis of Poliomyelitis | The BMJ

Pathogenesis and Immunity. Poliovirus is transmitted by the fecal oral route on ingestion of contaminated water. The viral particles initially multiply in the nasopharynx and the gastrointestinal mucosa. The virions are resistant to acidity of stomach and to lytic activities of the protease and other enzymes of the intestinal tract and bile.

Pathogenesis and Immunity - Poliovirus - BrainKart

The post-polio syndrome is a slowly progressive weakness with atrophy and fasciculations of skeletal and/or respiratory muscles affecting patients decades after there has been maximal recovery from acute paralytic poliomyelitis. The pathogenesis has not yet been established but many hypothetical explanations have been suggested.

Pathology and pathogenesis of human poliomyelitis

Poliovirus was first isolated nearly 100 years ago in a landmark experiment that established the viral etiology of poliomyelitis. This discovery stimulated investigation of the pathogenesis of poliomyelitis in many laboratories.

One hundred years of poliovirus pathogenesis - ScienceDirect

It is believed that the pathogenesis of PPS is caused by the failure of oversized motor units created during the recovery process of initial paralytic polio. PPS is rarely life threatening but has a slow, step-wise, unpredictable course.

PATHOLOGY, PATHOGENESIS AND EPIDEMIOLOGY OF POLIOVIRUS ...

Poliovirus (PV) is the causal agent of paralytic poliomyelitis, an acute disease of the central nervous system (CNS) resulting in flaccid paralysis. The development of new animal and cell models has allowed the key steps of the pathogenesis of poliomyelitis to be investigated at the molecular level.

(PDF) Poliovirus, Pathogenesis of Poliomyelitis, and Apoptosis

Poliovirus pathogenesis in a new poliovirus receptor transgenic mouse model: age-dependent paralysis and a mucosal route of infection, Page 1 of 1 < Previous page | Next page > /docserver/preview/fulltext/jgv/83/7/0831707a-1.gif We constructed a poliovirus receptor (PVR) transgenic mouse line carrying a PVR δ cDNA driven by a β -actin promoter.

Microbiology Society Journals | Poliovirus pathogenesis in ...

Poliovirus, a human enterovirus that belongs to the family Picornaviridae, is the causative agent of poliomyelitis. Humans are the only natural hosts of poliovirus. The virus, however, can be transferred to monkeys when it is directly inoculated into the central nervous system (CNS).
