Climate Change: Impacts & Responses Research Network: exploring scientific, policy & strategic perspectives on the impacts of, & responses to, climate change

### **Climate Change: Impacts & Responses Research Network**

Climate change denial, or global warming denial, is part of the global warming controversy. It involves denial, dismissal, or unwarranted doubt that contradicts the scientific opinion on climate change, including the extent to which it is caused by humans, its impacts on nature and human society, or the potential of adaptation to global warming by human actions.

CLIMATE SECURITY 'Climate security' is a rather elusive concept that has been defined in many different ways. At a basic level, climate security is commonly referred to as threats to states, societies, and individual citizens, encompassing any threats and risks directly or indirectly caused by climate change. 12, 29 While the conventional definition of security refers to violent and direct ...

Introduction Man-made carbon dioxide is generally thought to produce global warming. However, in a recent article entitled "Does Carbon Dioxide Drive Global Warming?" I presented several major reasons why carbon dioxide is probably not the primary cause.<sup>1</sup> But if carbon dioxide is not the cause, then what is? Evidence is accumulating that cosmic rays associated with fluctuations in the sun's ...

In Africa, IPCC (2007:13) projected that climate variability and change would severely compromise agricultural production and access to food. This projection was assigned "high confidence." Africa's geography makes it particularly vulnerable to climate change, and seventy per cent of the population rely on rain-fed agriculture for their livelihoods.

Browse cutting-edge research papers commissioned by the National Recreation and Park Association (NRPA). The NRPA research papers present evidence on the important impact made by parks and recreation in local communities in America.

### **NRPA Research Papers - National Recreation and Park ...**

1. Introduction. By 2050, agricultural production will need to increase substantially to feed growing and urbanising populations, particularly in sub-Saharan Africa (SSA) and South Asia. Estimates of the increase needed vary between 25 and 70%, depending on the assumptions made about efficiency and consumption pattern changes (Alexandratos and Bruinsma, 2012; Hunter et al., 2017).
