Examples of SOAP charting for Respiratory Students

The rate can be irregular with disease of the respiratory system. Any irregularities should be noted and reported to the medical team. When observing the respiratory rate, it is important to note the colour of the patient's lips. They may be cyanosed (blue) or discoloured if the patient has respiratory problems.

Respiratory assessment | Clinical | Nursing Times

In this text, we will not go into detail about these structures, because most nurses are already quite familiar with the respiratory muscles, primary and secondary. If you need a refresher, you may use any basic anatomy test. In this text, we wish to update you on assessment of the lungs and thorax.

Physical Assessment - Nurses Learning Network

One of the hardest thing for me to learn, so far in nursing school, is assessing my patient and then documenting my subjective and objective data. It's not that it's a hard concept for me. Assessing a patient basically means learning how to take a history of/examine a patient and look for normal/abnormal findings, subjective...
