PG 18-10 - Plumbing Design Manual

A good design incorporates short runs between plumbing fixtures and uses state-of-the art materials. A plumbing design must include two systems: the system that supplies water and the system that gets rid of waste. The drain system also has vent stacks that allow drainpipes to breathe and move sewer waste through the sewer pipes.

How to Design Plumbing | Home Guides | SF Gate

The Plumbing Engineer can develop the design of these systems while keeping in mind that the ultimate whole building goal is to reduce the amount of water used by a facility. For example a storm water collection system can be used in the landscaping irrigation system in stead of an irrigation system using domestic water.
