Solar System Facts: A Guide to Things Orbiting Our Sun. Our solar system is a vast place, with lots of mostly empty space between planets. But out there are comets, asteroids and more rocky, frozen objects (including dwarf planets) yet to be discovered in the Kuiper Belt and Oort Cloud.

### **Solar System Facts: A Guide to Things Orbiting Our Sun**

Early astronomers believed that Earth was the center of the universe and all other heavenly bodies orbited around Earth. • We now know that our sun is the center of our solar system and eight planets, a handful of dwarf planets, 170 named moons, dust, gas, and thousands of asteroids and comets orbit around the sun.

### **www.solpass.org**

On the blank spaces below, write the names of the eight planets in our solar system based on their position from the sun. Begin by labeling the first blank space with the planet that is closest to the sun and finish by labeling the eighth blank space with the planet that is farthest from the sun.
