Ruby is "an interpreted scripting language for quick and easy object-oriented programming" -- what does this mean? ... powerful string operations and regular expressions; immediate feedback during development; quick and easy: variable declarations ...

### **Ruby User's Guide - rubyist.net**

A regular expression is a special sequence of characters that helps you match or find other strings or sets of strings using a specialized syntax held in a pattern. A regular expression literal is a pattern between slashes or between arbitrary delimiters followed by `%r` as follows – `#!/usr/bin/ruby` ...

### **Ruby Regular Expressions - Tutorials Point**

See: Ruby User's Guide Ruby Manual. Regular expressions are patterns which can be matched against strings. The usual syntax is to surround them with slashes, which create a `Regexp` object, much as putting quoted characters create a `String` object. As the `%Q` for strings, ...

### **Regular Expressions I - sandbox.mc.edu**

Rubular is a Ruby-based regular expression editor. It's a handy way to test regular expressions as you write them. To start, enter a regular expression and a test string.

### **Rubular: a Ruby regular expression editor**

A regular expression is simply a way of specifying a pattern of characters to be matched in a string. In Ruby, you typically create a regular expression by writing a pattern between slash characters (`/pattern/`). In Ruby, regular expressions are objects (of type `Regexp`) and can be manipulated as such.

### **Ruby Regular Expressions: Ruby Study Notes - Best Ruby ...**

I don't know how to implement regular expressions in Ruby. I tried this code, but it always returns true: `firstName = "Stepen123" res = Validation_firstName(firstName) puts res def Validation_firstName(firstName) reg = /[a-zA-z][^0-9]/ if reg.match(firstName) return true else return false end end` I am not sure what I did wrong.

### **regex - How do I use regular expressions in Ruby? - Stack ...**

Note how in Ruby one can define a regular expression by enclosing it with slashes /. There are other ways to define regular expressions, too, but this is the most common one. But that's kinda boring, right? We could just use the method include? for strings, which lets us figure out the same thing. Let's spice this up a little. Anchors ...
