Hydraulic engineering as a sub-discipline of civil engineering is concerned with the flow and conveyance of fluids, principally water and sewage. One feature of these systems is the extensive use of gravity as the motive force to cause the movement of the fluids. This area of civil engineering is intimately related to the design of bridges, dams, channels, canals, and levees, and to both ...

Two major areas of fluid mechanics applications in civil engineering are open channel flow and flow in pipes. The Manning equation is used for uniform open channel flow calculations including flow rate and normal depth. The Darcy Weisbach equation is used along with the friction factor for pipe flow calculations. Another alternative for pipe flow calculations is the Hazen Williams equation for ...
