Default Administrative Distances. Administrative distance (AD) is the trustworthiness (or preference) of the route source. OSPF has a default administrative distance of 110. As you can see from the figure, when compared to other interior gateway protocols (IGPs), OSPF is preferred over IS-IS and RIP.

On R1's updated routing table, a route to network 3 (192.168.3.0/24) using R2's serial 0/0 interface (192.168.5.2) as next hop, was added. Again, you issue a few pings from PC1 to network 3 devices but this time they are all successful.

Routing Table Sources (1.3.1.2) On a Cisco router, the show ip route command is used to display the IPv4 routing table of a router. A router provides additional route information, including how the route was learned, how long the route has been in the table, and which specific interface to use to get to a predefined destination.

CCNA2-1 Chapter 6. • Eventual exhaustion of 32-bit IPv4 address space. Routing (CIDR). • More efficient use of IPv4 address space. • To CIDR-compliant routers, address class is meaningless. • Networks are converted to binary. MUST be contiguous. • Requires a classless routing protocol (RIPv2, EIGRP, OSPF).

R2 speaks 2 routing protocols simultaneously. How many routing tables R2 keeps? Answer: Only 1 routing table. Despite the number of routing protocols running into a router, only one routing table is kept and only the best route is installed into the routing table. Many parameters are considered when selecting the best route.
