In physics, system is the suffix we give to a collection of objects that we choose to model with our equations. If we are to describe the motion of an object using conservation of energy, then the system should include the object of interest and all other objects that it interacts with. In practice,...

Conservation of energy, principle of physics according to which the energy of interacting bodies or particles in a closed system remains constant. The first kind of energy to be recognized was kinetic energy, or energy of motion. In certain particle collisions, called elastic, the sum of the kinetic energy of the particles before collision is equal to the sum of the kinetic energy of the ...

Lesson 40: Conservation of Energy Total Mechanical Energy We sometimes call the total energy of an object (potential and kinetic) the total mechanical energy of an object. "Mechanical" energy doesn't mean that it always has to involve machines. An apple falling off a cliff has gravitational potential and kinetic energy, so it therefore has mechanical energy.

Lesson 40: Conservation of Energy - Studyphysics

Correct answer: Conservation of energy shows that the initial energies will be equal to the final energies. Choosing the bottom of the incline to be the zero height, the ball starts out with kinetic energy and zero potential energy. When the ball reaches maximum height, its velocity is zero (zero kinetic energy). This simplifies our energy equation.
