Physics Principles and Problems Chapter 24 Magnetic Field ...

The magnetic field created by a magnetic dipole (at distances much greater than the size of the dipole) is approximately equal to a constant, μ_0 , multiplied by the dipole moment divided by the cube of the distance from the dipole. EDIT: This formula is incomplete. The field from a dipole is a vector that depends not only on the distance from the dipole, but also the angle relative to the ...

Magnetic fields and lines of force. A bar magnet attracts iron objects to its ends, called poles. One end is the north pole, and the other is the south pole. If the bar is suspended so that it is free to move, the magnet will align itself so that its north pole points to the geographic north of the earth.
