By Barry Harmsen. For QlikView developers wanting to bridge the gap between QlikView and extension development, the lack of documentation and scattered examples can make it seem like a daunting task. In reality though, once you find the right resources it is a relatively small step. The goal of this post is two-fold.

The problem with most BI vendors is that they rely on query-based analysis that restricts people to linear exploration within a partial view of their data. Qlik's Associative engine lets you combine any number of data sources so you can freely explore across all your data and instantly pivot your thinking based on what you see.

Instead, I use QVDs. QVDs are proprietary QlikView data files that reside on a file server. They hold one table's worth of data. They will load into QlikView way faster than the same amount of data coming from an external database. So what I do is load all the data from the database tables one time and store that table in its raw form into QVDs.
