Submit correction. If you see anything in the documentation that is not correct, does not match your experience with the particular feature or requires further clarification, please use this form to report a documentation issue.

PostgreSQL 10.7 Documentation

PostgreSQL provides a large number of functions and operators for the built-in data types. Users can also define their own functions and operators, as described in Part V. The psql commands \df and \do can be used to list all available functions and operators, respectively. If you are concerned about portability then note that most of the functions and operators described in this chapter, with ...

PostgreSQL: Documentation: 9.2: Functions and Operators

Both the system-wide startup file and the user's personal startup file can be made psql-version-specific by appending a dash and the PostgreSQL major or minor release number to the file name, for example ~/.psqlrc-9.2 or ~/.psqlrc-9.2.5. The most specific version-matching file will be read in preference to a non-version-specific file.

PostgreSQL: Documentation: 9.2: psql

The release notes contain the significant changes in each PostgreSQL release, with major features and migration issues listed at the top. The release notes do not contain changes that affect only a few users or changes that are internal and therefore not user-visible. For example, the optimizer is ...

PostgreSQL: Documentation: 9.2: Release Notes

RETURN with an expression terminates the function and returns the value of expression to the caller. This form is used for PL/pgSQL functions that do not return a set. When returning a scalar type, any expression can be used. The expression's result will be automatically cast into the function's ...
