2.2 Ogee (overflow) Spillways The ogee spillway as shown in Fig.3 (a) and Fig.3 (b) has a control weir, which is ogee or S-shaped in profile. Ordinarily, the upper curve of the ogee spillway is made to conform closely to the profile of the lower nappe of a ventilated sheet falling from a sharp-crested weir.

Their results showed that reduction in the design head, increase the average rate of the flow over spillway consequently, the Froude number also decreases [10]. Morales et al. (2012) conducted a numerical and physical modeling of ogee spillway with radial valve of the Connor River diversion dam in Ecuador.

Numerical Investigation of Inverse Curvature Ogee Spillway ...

Overflow phases and discharges of the linear labyrinth weir and the curved labyrinth weir were compared with those of the linear ogee weir. It was found that the discharge of the labyrinth weir was 71 % greater than that of the linear ogee weir at low reservoir elevation because the labyrinth weir had a longer effective length.

Common types of spillways include: free overflow, ogee, labyrinth, conduit, tunnel, drop inlet, open channel, baffled apron drop, and culvert. Free overflow or straight drop spillways are spillways in which flow falls freely after passing over the crest of the spillway. For an example of a spillway crest, please refer to figure 2, shown below.

Major dam will be usually provided with an overflow spillway with crest gates. However, the type and location of spillway depends on the site conditions of topography. 33.2 Ogee Type Spillway Profile This type of spillway is the most common type adopted in the field. It divides naturally into three zones. Crest, spillway face and the toe.
