Pipe Rack Design Guide

A pipe rack is the main artery of a process unit. It connects all equipment with lines that cannot run through adjacent areas. Because it is located in the middle of the most plants, the pipe rack must be erected first, before it becomes obstructed by rows of equipment.

[PPT] Basics of Pipe Rack and Rack Piping | PIPING GUIDE

design of pipe racks varies widely depend-ing upon the plant operations and the associated plant standards. However, pipe rack failures could cause serviceability problems for plant operations. Failures of pipe support systems could potentially impact the health, welfare, and safety of plant personnel due to pipe breakage or leaks.

Structural Design of Steel Pipe Support Structures

Structural expansion joints are not used in pipe rack design. Independent rack sections separated every 100 ft distribute the growth and contraction to amounts manageable without expansion joints in the structural steel frame. Much more important to consider that when designing long continuous conveyor belt bridges and towers.
