After completing steps 4 and 5, use the PLASMID MAP on the yellow answer sheets to map the relative locations of the DNA code for each of the antibiotic resistances. Use a

The E. coli Insulin Factory - Biology Junction

Best Answer: 1) So that the Glo gene would be transcribed and expressed, so we can see that we have successfully transformed the cells into which we place the engineered plasmid. 2) Insufficient information. If there is a EcoR1 site in either the middle of the Glo gene, or in the middle of the selectable marker site in the plasmid, it would likely disable either Glo, or the plasmid.
