14. a. Draw a flowchart to represent the logic of a program that allows the user to enter a value that represents the radius of a circle. The program calculates the diameter (by multiplying the radius by 2), and then calculates the circumference (by multiplying the diameter by 3.14). The program prints both the diameter and the circumference. b.

programming logic and design | eBay

Top-Down Program Design. For large projects, many programming staff members find that top-down design helps them focus on what a program needs and helps them detail the logic required to produce the program's results. Top-down design is the process of breaking down the overall problem into more and more detail until you finalize all the details.
